About Kerone

KERONE now renowned name in serving specialized need of customers with best quality and economical process Heating /cooling and drying products, manufactured in high quality environment by well trained and qualified workforce(special purpose machineries) .

KERONE is pioneer in application and implementation engineering with its vast experience and team of professionals. KERONE is devoted to serve the industry to optimize their operations both economically and environmentally with its specialized heating and drying solutions.

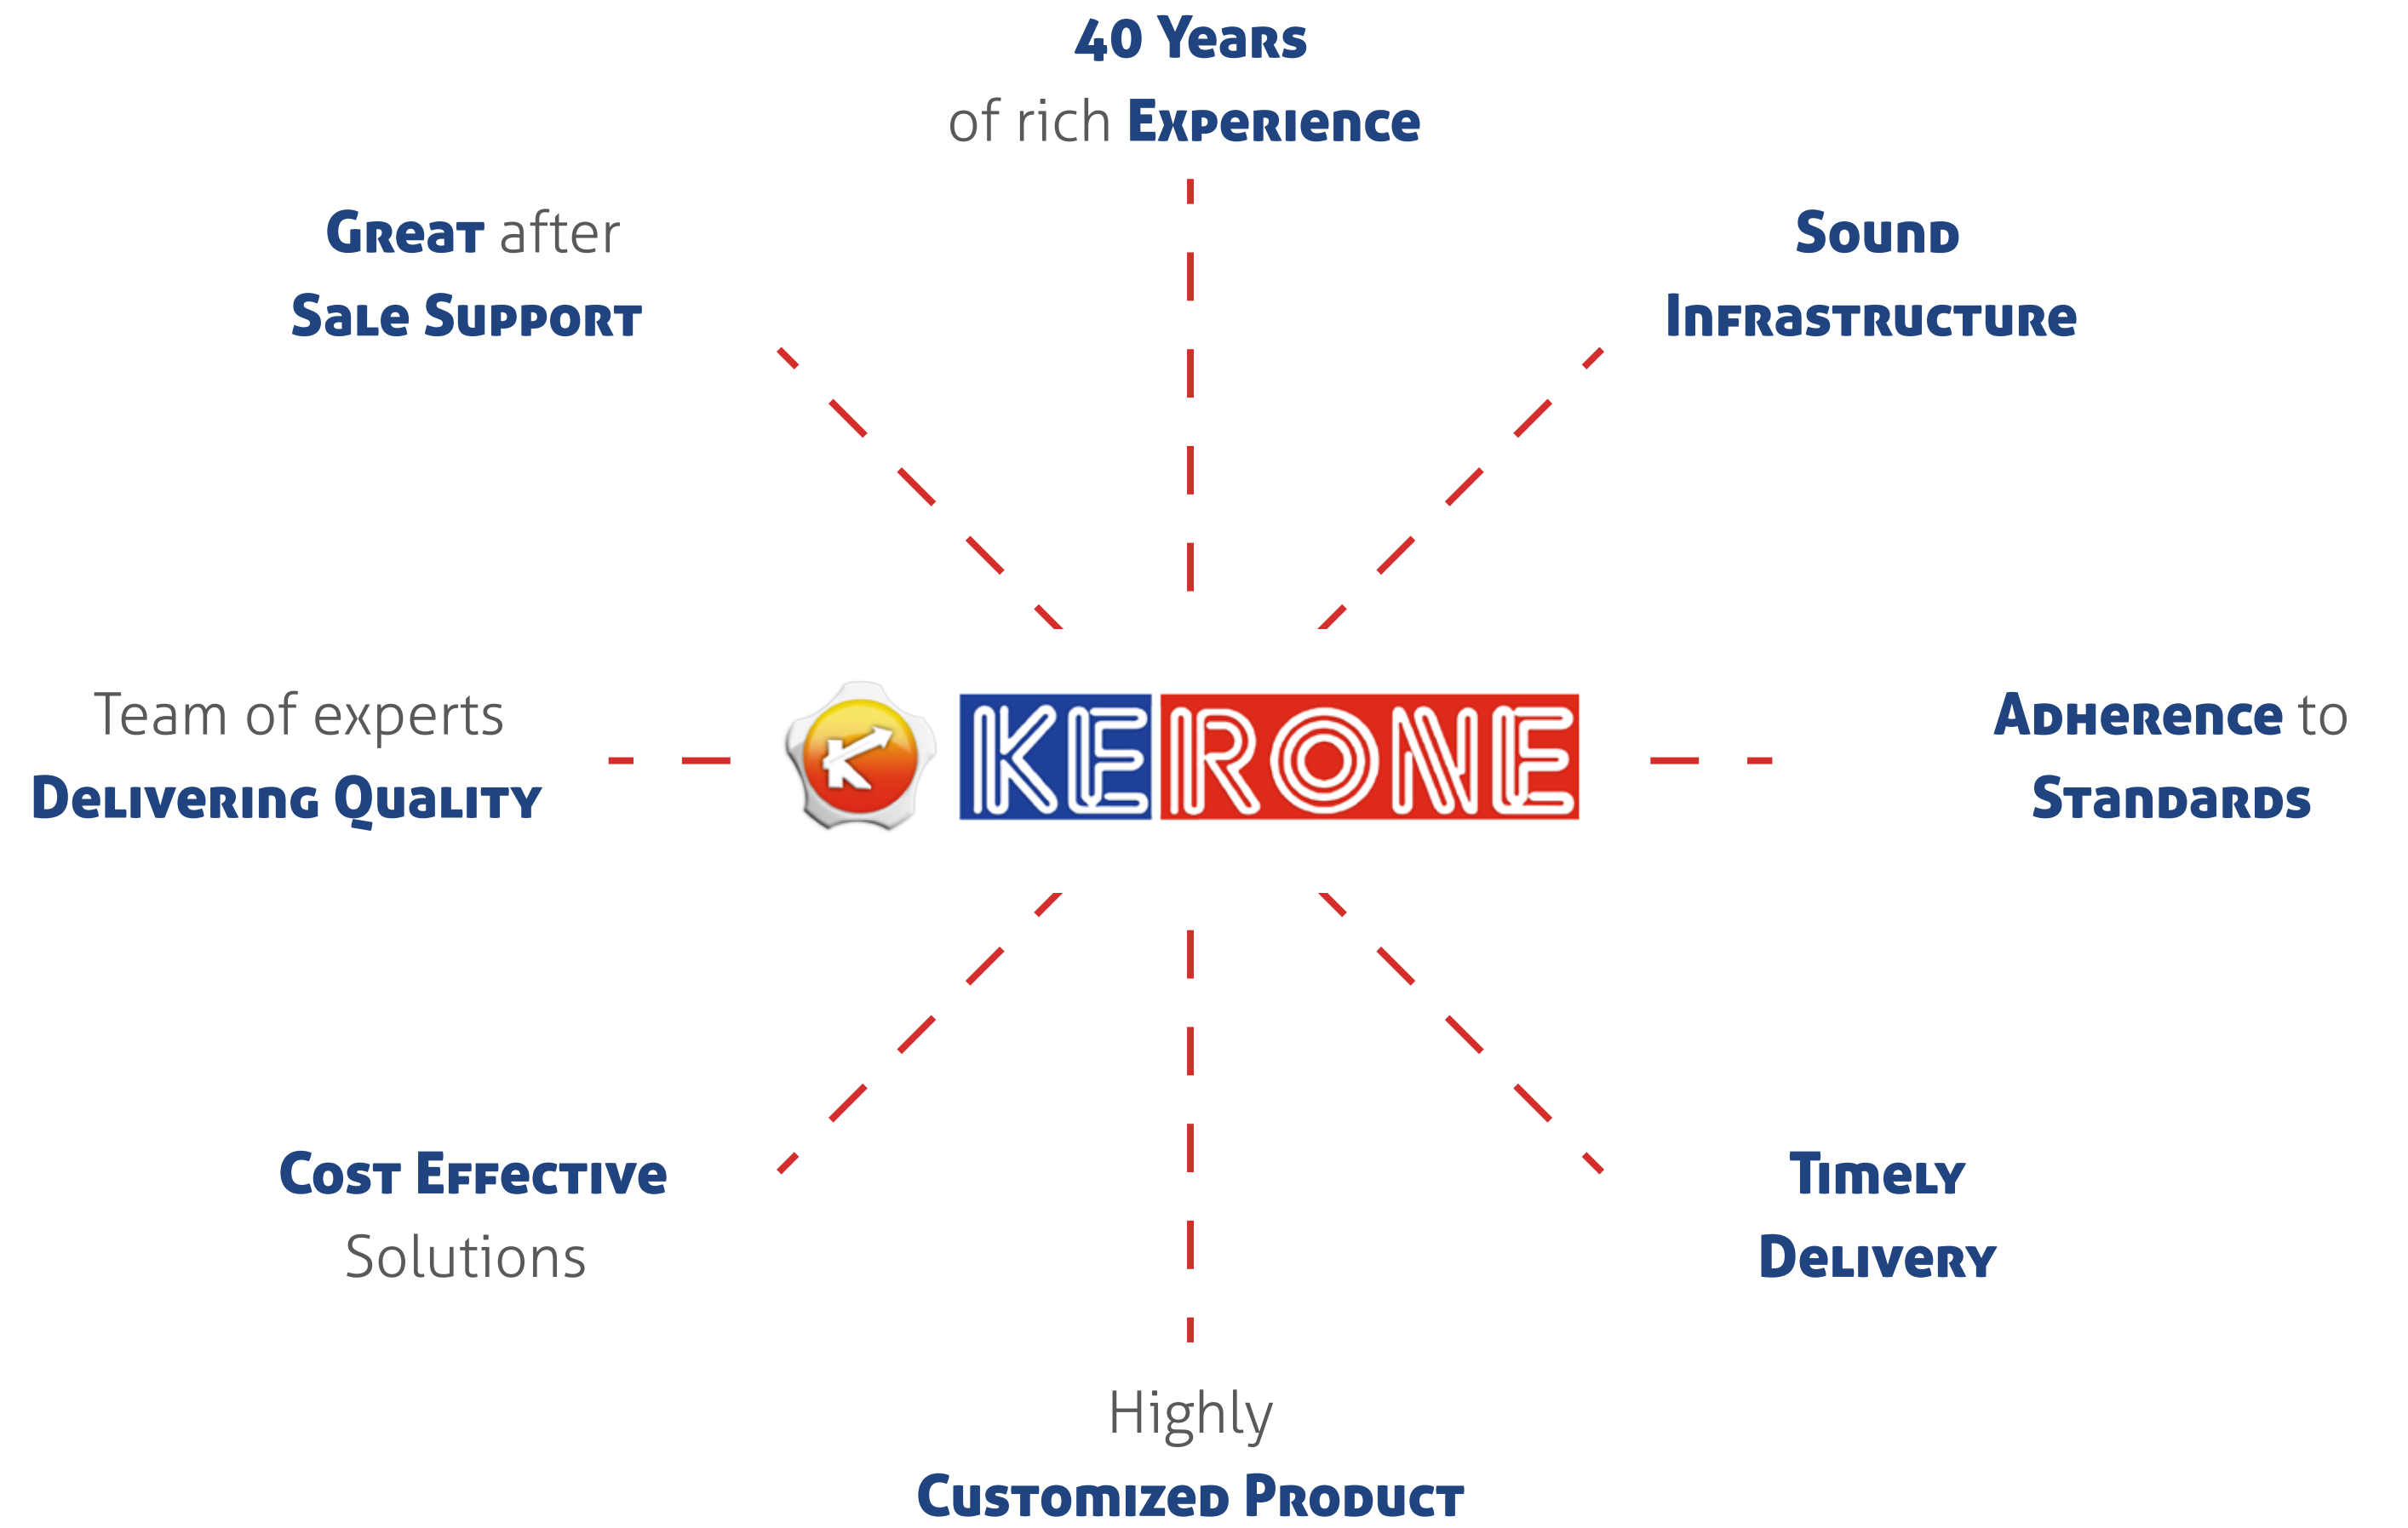

“Enhance the value of customer operation through our customer need centric engineering solution”

Mission

- To enhance the value of customer operation through our customer need centric engineering solution.
- We are committed to provide our customers, unique and best in class products in Industrial heating, drying and cooling segment, with strategic tie-up for the technical know-how with renowned leader in the industry specific segment.

Vision

- Turn into world leader in providing specialized, top-notch quality and ecological industrial heating, cooling and drying solution across the globe.
- To attain global recognition as best of quality and environment friendly engineering solution company.

Introduction to Steam Coils

At KERONE we manufacture high quality and durable steam coils, for the purpose of transferring heat from one point to other, steam is the favored medium for heat transfer all through much of industry.

Steam is simple and economical to move from the heater to the point of utilization, and it surrenders much of its vitality at a steady temperature when it gathers. Procedure control is simple and quick with steam, and there is basically no slack time.

Standard Steam Coils are intended for medium temperature applications where the entering temperature is 550 F or higher. Our coils could be intended for different steam weights with pitched-in packaging choices for speedy condensate evacuation.

Non-Freeze steam coils are intended for low temperature applications with entering air temps of 550 F or less. Outline and creation is finished with buildup evacuation as a high necessity. These coils are planned with one header, a tube-inside-a-tube setup, and baffle which steer the steam through the inward tube permitting buildup to be cleared through the external tube.
